

## PROJECT OF THE MONTH

### Teammates designs, installs furniture for Time Warner ATG West

Locally owned Teammates Commercial Interiors recently completed furniture design and installation services for Time Warner ATG West, Time Warner Cable's Web Services Group.

Once a manufacturing facility for horse-drawn carriages, this vintage building in Denver's historic district retains vestiges of a lost industry: Metal carriage racks snake across the ceiling; an enormous weathered barn door divides interior space, exposed brick and thick raw beams exemplify the historic value of the space.

The Web Services Group spends its days revolutionizing technology to deliver cable to the internet. Members primarily work in teams, with multiple monitors, flip-charts and white boards; feeling most productive when members can communicate easily, openly and instantaneously.

For its space, the group chose Teknion's Marketplace freestanding systems for their uninterrupted span that allows plenty of room to support pair programming, as well as significant horizontal space for documents, monitors and electronics.

For their casual meetings and touchdown space, the group chose dnaTM by Teknion. This modular lounge seating serves as a collaborative, flexible workspace that can be effortlessly re-arranged.
